Moving Day for Auto Collision

"It was a great day moving tools and equipment from storage at the LCC warehouse!", stated LCC Auto Collision Instructor Anthony Baca. Tools and equipment that were being stored during construction of the new Auto Collision building were as follows: shadow boards, prep stations, body shop tool kits, painters, sanders, dent removal systems, wire welder, windshield removal kits, and many more items are now located in the new building. Students will now be able to use the state-of-the-art equipment in their pursuance of mastering skills in the Auto Collision program. A check out/check in system with tool tags will be used by students to better keep track of the accountability of the new items so students are able to use all the tools.

An Open House will take place in February for the ribbon cutting ceremony to officially open the new building.
